

What is the output ?

```
type Speaker interface {  
    Speak() string  
}  
type Dog struct{}  
  
func (d *Dog) Speak() string {  
    return "Woof"  
}  
  
func main() {  
    var s Speaker = Dog{}  
    fmt.Println(s.Speak())  
}
```

```
func main() {  
    var a interface{} = int32(5)  
    var b interface{} = int64(5)  
    fmt.Println(a == b)  
}
```

```
func main() {  
    var a interface{} = []int{1, 2, 3}  
    var b interface{} = []int{1, 2, 3}  
    fmt.Println(a == b)  
}
```

```
func main() {  
    var a interface{} = []int{1, 2, 3}  
    var b interface{} = []int{1, 2, 3}  
    fmt.Println(a == b)  
}
```

GoodLuck 😊
